

INTERTEX Office and Manufacturing Facilities

A series of four, concrete panel “shell” buildings located in the Valencia Commerce Center. Developed by Intertex General Contractors, these 40,000 square foot “tilt up” facilities began as speculative projects and were each purchased by companies wishing to quickly locate their expanding

businesses. Combs + Miguel Architecture worked with each new owner to design the interior offices, manufacturing and warehousing spaces. Programming, space planning, and interior design services were provided for each client as well.
