

PLEASANTVIEW INDUSTRIES

A new addition for a workshop for developmentally disabled adults; the design included several features including a new conference room addition to the existing 3200 square foot building. A circular shape was used to create a distinctive space, and the introduction of several clearstories helped bring in a greater quantity of

natural light. The new acoustic ceiling also helped make the area feel more receptive. On the exterior, a wooden overhang complimented the wooden shingles used on the roof. The now 4576 square foot space offers this site the room it needs. More parking spaces and a new landscaping design were also part of the project.
